

SUB-CHECK

Cloud-Based Behavioral Anti-Cheat Platform

Assignment 3: Customer Development (CustDev)

Course: Technology Entrepreneurship

Team: Nurzhan Bekmurat • Azamat Yermukhan • Yernur Khuan

Repository: github.com/Scirtor/subcheck-anticheat

1. Problem Statement & CustDev Objectives

Why existing anti-cheat systems are failing the modern gaming ecosystem

Intrusive Kernel Drivers

Ring 0 rootkits (Vanguard, EAC) cause system instability, BSODs, and severe player privacy backlashes.

Hardware Cheats (DMA)

Second-PC PCIe DMA cards and hardware emulators bypass all client-side memory scanning entirely.

Indie & Linux Lockout

Enterprise tools cost 0k-0k+ upfront and lock out Linux, SteamOS, and Steam Deck players.

CustDev Objective: Validate these problem hypotheses with real players, tournament organizers, and indie developers, and quantify market demand for a server-side behavioral model.

2. Audience Segmentation & Prioritization

Selecting key target segments based on accessibility, volume, and satisfaction

Segment	Profile & Description	Access	Volume	Impact	Priority
Segment A: Competitive Gamers	Ranked FPS players (CS2, Valorant, Apex, R6) suffering from cheaters & driver crashes.	5 / 5	5 / 5	4 / 5	P1 (Primary)
Segment B: Tournament Hosts / Admins	Collegiate leagues, community server admins battling closet cheaters & DMA hardware.	4 / 5	3 / 5	5 / 5	P2 (Secondary)
Segment C: Indie Game Developers	Studios needing affordable, easy-to-integrate multiplayer game integrity solutions.	3 / 5	3 / 5	5 / 5	P3 (B2B SaaS)

3. Field Research Execution Status

Ongoing interview and survey data collection

Data Collection In Progress

Interviews with target respondents across all three segments are actively being conducted.

Target sample size: **Minimum 30 respondents** or **5 video-recorded interviews**.

Evidence, notes, and raw responses are cataloged in `questionnaire/responses.csv` and `evidence/`.

4. Next Steps: Data Synthesis & Model Updates

Planned roadmap following completion of interviews

- **Data Analysis:** Aggregate responses into quantitative charts and identify recurring customer pain points.
- **Value Proposition Canvas Update:** Refine pain relievers and gain creators based on authentic user feedback.
- **Final Deliverables:** Generate final analysis charts, update report and presentation before course deadline.
