

Assignment 3 — Customer Development

Course: **Technology Entrepreneurship** | Topic: Customer Validation & CustDev

PROJECT TITLE

SUB-CHECK — Cloud-Based Behavioral Anti-Cheat

TEAM MEMBERS

- Nurzhan Bekmurat
- Azamat Yermukhan
- Yernur Khuan

Submission Repository

All Assignment 3 materials, including the Customer Development questionnaire, interview evidence, raw data, statistical analysis, full report, and presentation slides, are organized and maintained in the project repository:

Official GitHub Repository:

<https://github.com/Scirtor/subcheck-anticheat>

The repository is actively updated with all project deliverables and interview evidence for Assignment 3 before the course submission deadline.

Project Summary

SUB-CHECK is a cloud-native, server-side behavioral anti-cheat platform designed for multiplayer competitive gaming. Instead of relying on invasive kernel-level software (Ring 0) that

compromises player privacy and prevents cross-platform compatibility, SUB-CHECK analyzes high-frequency kinematic telemetry (view angles, cursor offsets, micro-tremor biometrics, and reaction latencies) directly on the game server. It produces a continuous, normalized cheat probability score (0.0–1.0) to enable risk-driven matchmaking, automated flagging, and targeted review.

REPOSITORY DELIVERABLES BREAKDOWN

- **report/** — Final Assignment 3 CustDev Report and documentation
- **questionnaire/** — Audience segmentation and Customer Development interview questions
- **evidence/** — Interview transcripts, participant notes, and screenshots
- **analysis/** — Data metrics, statistical spreadsheets (analysis.xlsx), and analytical charts
- **presentation/** — Assignment 3 CustDev presentation slide deck
